Yes Laura, I think it would be very helpful for you to extend if you are able.

**Subject:** FW: Winter Discharge Treatment

We're good....sorry again....lots happening and just trying to get things done.

On a somewhat related note, Althea/Mike asked if I would be willing/able to extend down here. I told them, first and foremost, they need your okay. Beyond that, I told them I need to fly home tomorrow for a weekend family commitment but was available to return on Monday – provided this is where you want me to be. Spoke with Rich Mylott just now and asked him to see what you want me to do. I'm perfectly fine coming back down here for a 2<sup>nd</sup> deployment but can only stay through 10/6.

Steve:

I may have erred on the side of timely notification....but didn't see Shaun's note until after I forwarded notification to NN. Sorry if I jumped the gun, I was just trying to make sure they were notified before the press....which is happening momentarily.

Sorry,

Laura Jenkins

Shaun, didn't see NN under R8 or R6's notifications. Do you know who is handling?

All,

We are cleared to move forward.

Rebecca, please commence the notifications of elected officials.

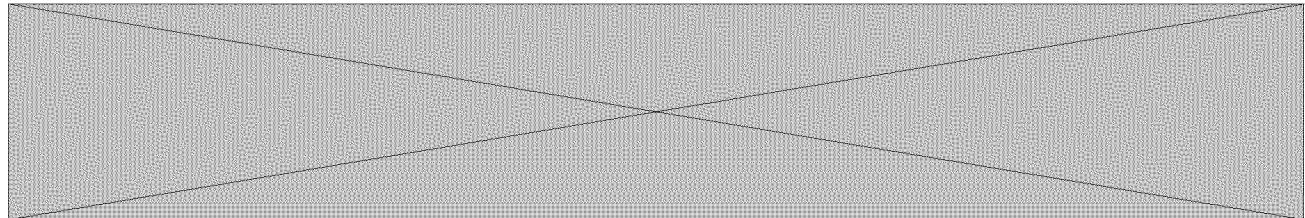

Laura, at 1:30 MST, issue the release to the media.

Thanks,

Shaun

**FOR IMMEDIATE RELEASE:**  
Sept. 23, 2015

## **EPA Announces Gold King Mine Water Treatment System for Winter 2015-16**

(Washington, DC) -- The U.S. Environmental Protection Agency (EPA) announced today that a portable, temporary treatment system will be located in Gladstone, CO (elevation 10,500ft) to continue treating water discharged from the Gold King Mine during winter 2015-16. This system will replace temporary settling ponds constructed by the EPA in August 2015.

The transition to the portable treatment system is necessary as local winter temperatures can reach -20F, making it unsafe to manually treat water at the mine site. The schedule calls for the treatment system to be operational by Oct. 14, 2015. EPA's contractor, ER LLC, awarded a subcontract Sept. 22, 2015 to Alexco Environmental Group (US) Inc. to complete the work.

This system will treat the approximately 550 gallons per minute (gpm) of water that continue to flow from the mine, including the discharges related to ongoing work in the mine to stabilize conditions. The system is designed to handle up to 1,200 gpm. The objective of the treatment system is to neutralize the mine discharge and remove solids and metals. Although the Gold King Mine discharge is just one of many into Cement Creek, the treatment will remove a portion of the metal loading to Cement Creek.

The EPA continues to evaluate data to determine the impact of the Gold King Mine on water quality.
